

**AVERY
DENNISON®**

SNAP™ 500 Printer

2/1 2/0 1/1 1/0 & 2/1 600DPI

**AVERY DENNISON
Manual Edition 2.2
17 July 2013**

Manual Part Number 631398

WARNING

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1) this device may not cause harmful interference, and
- 2) this device must accept any interference that may cause undesired operations.

This Class A digital apparatus meets all requirements of the Canadian Interference Causing Equipment Regulations. Cet appareil numérique de la classe A respecte toutes les exigences du Règlement sur le matériel brouilleur du Canada

1.0 Introduction

AVERY DENNISON has designed the SNAP™ 500 printer for simple installation, easy operation, and dependability. Use your printer to produce two-sided, multi-color care labels for your apparel, footwear, or other products needing identification. Printing up to a speed of up to 7 inches (178 mm) per second, (supply dependent) the SNAP 500 printer features quick change-outs of inks and tapes, multilingual voice prompts, and easy operating system updates.

The new SNAP 500 multiply head printer can have four different head configurations when ordered. This manual covers all four configurations.

This manual guides the printer operator as an easy-to-use, quick-reference guide. It contains procedures for receiving, handling, set-up, installation, operation, and maintenance of the SNAP 500 printer.

Please read this section of the manual to familiarize yourself with the printer and to guide you through the initial receiving and set-up of your new SNAP 700 printer. Throughout this manual, a system of NOTES, CAUTIONS, and WARNINGS identify key information to ensure your personal safety and to proper printer operation. Please review these carefully.

We also strongly suggest that you watch the 17-minute training video, which is available on the D2Comm web site. Refer to the documentation included with the printer for more details.

NOTES call attention to information that is especially significant to understanding and operating the equipment.

CAUTION notices inform you of actions or situations in which the printer might be damaged.

WARNING notices describe situations in which lack of attention or insufficient equipment knowledge could cause either personal injury or damage to the printer.

2.0 Installation

2.1 Preparing for the installation

2.1.1 AC Power Line

NOTE: AVERY DENNISON requires that the minimum electrical service be 10 Amps @ 115VAC or 6 Amps @ 230VAC. This will allow the SNAP 500 printer, PC, and any additional support or service equipment to be plugged into the same service. It is highly recommended that the printer and its accessories be on a dedicated circuit.

The electrical service supplying power to the SNAP 500 printer or to peripheral equipment connected to the SNAP 500 printer should meet standard electrical code practices, including proper grounding and neutrals.

2.1.2 Location Considerations

The SNAP 500 printer weighs 55 pounds (25 kg) and requires a table of sufficient quality and strength to handle this load. The printer requires an area of approximately 72" wide x 30" deep x 32" high (1.8 m x 76 cm x 81 cm). The host PC (if used) and any printer options will increase the required area. AVERY DENNISON recommends using an industrial type worktable. Refer to Figure 1 below.

The SNAP 500 printer is designed for easy operator accessibility to the printer controls and components. Select your SNAP 500 printer's location that optimizes product flow and operator comfort:

1. Physical demands on the operator will dictate proper height of the table supporting the printer. Ensure the operator has comfortable access to the printer. Refer to Figure 1.
2. Allow enough space for smooth flow of materials that the operator will load on the printer as well as space for processing the finished product from the printer.
3. While AVERY DENNISON has designed the printer to be reasonably quiet, select an area where repetitious noise from printing and cutting processes is acceptable.

CAUTION: Each customer must take responsibility to ensure the workstation created for the SNAP 500 printer meets the recommended requirements to ensure optimal operation of the printer.

Figure 1: Recommended Workstation Layout

2.1.3 PC Requirements

Most customers use a personal computer to download information to the SNAP 500 printer. The printer can be connected to any type of computer capable of sending the AVERY DENNISON Command Language, or PCL.

PCMate Platinum tag and label printing software supports the new virtual control panel feature when using the SNAP 500 printer. PCMate features higher communication speeds of the SNAP 500. Finally, it can deliver firmware upgrades from the Internet.

NOTE: PCMate Platinum requires the following minimum system:

- IBM® PC or Compatible
- Microsoft Windows® 2000, XP, 7 or later (check for latest version of Windows)
- At least 256 Megabytes of RAM
- At least 4 Gigabyte of available disk space
- Pentium III or later processor, 800Mhz
- Monitor with 1024 x 768 resolution
- CD ROM drive
- Internet Connection to access software upgrades and remote diagnostics

Refer to your PCMate Platinum user's manual for proper installation procedures.

2.1.4 User Safety

1. Follow all of the safety requirements and procedures established for your facility.
2. Turn off the power to the printer before cleaning, servicing, or replacing any components.
3. You do not have to turn off the power when loading or changing supplies.

CAUTION: The SNAP 500 printer has some pinch points which have safeguards design in. AVERY DENNISON strongly recommends that you do not modify or bypass these safeguards.

CAUTION: Danger of explosion id battery is incorrectly replaced. Return product to Avery Dennison for proper replacement and disposal. Call 1 – 800 – 543 – 6650

Warning: There are hazardous moving parts at the print head station. Keep hair, loose garments, jewelry and fingers away.

2.2 Receiving

The SNAP 500 printer shipping carton weighs 75 pounds (34 Kg). The carton is large and specially made to protect the printer. It may be awkward or difficult to move by hand to its installation location.

CAUTION: Do not remove the printer from the carton or unpack in the shipping/receiving department. Move the carton to the installation location.

1. Move the SNAP 500 printers with a forklift, forkcart or handcart to its intended location. It is easier and safer to use one of these handling devices to move the printer. Leaving the printer in the carton while it is being moved within your facility will help protect it until placed in its new location.
2. The stacker, remote display/control unit and any other accessories purchased for the printer may be shipped separately.

2.3 Unpacking

2.3.1 Removing the printer from the carton

1. Open the carton from the top by removing the banding straps and/or cutting the taped seam on the top of the carton.
2. Remove the foam-packing layer (see Figure 2A).

Figure 2A: Shipping Carton

CAUTION: Do not discard any of the packing / shipping material in case you have to move the printer to another location or return it to AVERY DENNISON for service.

3. The printer has been wrapped with shrink wrap to protect the printer from the packing material and moisture.
4. It requires 2 people to remove the printer from the carton.
5. Position your hands in the cardboard cutout as above. Carefully lift it out of the box. Lift the printer from the bottom out of the lower foam packing and place the printer on the workstation table.
6. Carefully remove the shrink wrap to avoid damaging the printer.
7. Turn the Stock Arbor knob counter-clockwise and remove the protective foam behind the Stock Arbor.
8. Unpack the stacker from its box and place it on the workstation table next to the printer. Refer to Section 2.5.1, Attaching the Stacker.

CAUTION: Lifting the printer from any component other than case or stacker supports can damage the printer and cause needless start up delays.

Figure 2B: Lift Locations

2.3.2 Inspection / Inventory Checklist

1. Inspect the printer for any damage that may have occurred from shipping.
2. Check the SNAP 500 printer shipping carton to be sure the following items are also included with your printer.
 - ☐ SNAP 500 printer User's Manual (if ordered separately) may be downloaded free from the web: <http://d2comm.paxar.com>, select "Tech Support"
 - ☐ Serial Cable
 - ☐ A quick-disconnect power cord for 115-Volt printer)
 - ☐ PCMate Platinum software on CD (shipped with each printer) The latest version of PCMate Platinum manual may be downloaded free from the web: <http://d2comm.paxar.com>, select "Tech Support"
 - ☐ Instructional Video (CD)
3. If you see obvious damage to the printer, or if any items listed above are missing, contact AVERY DENNISON for further instructions.
 - In the U.S.A., call (937) 865-2123, select option for Customer Service.
 - Outside the U.S.A., please contact your local AVERY DENNISON supplier.

2.4 Printer Description

2.4.1 Component Descriptions

Shown below are the important parts of the SNAP 500 Printer. Please take a moment to familiarize yourself with the printer.

Figure 3: SNAP 500 Printer

NOTE: Please take some time to become familiar with the printer's major components and their functions. Refer to Figure 3.

- **The Stock Unwind Arbor** holds the supply roll. By rotating the outer knob clockwise or counterclockwise, you can adjust the Tape Arbor to accommodate tapes ranging from ½ inch - 2 ¼ inches (12.7 mm - 57.2 mm) wide. The arbor auto-centers the tape through the printer. Metal fingers extend to hold the supply roll in place. This allows back tension which keeps the tape centered through the printer.
- **The Stock (Web) Guide** guides the stock through the printer and is adjusted by rotating the black knob.
- **The Upper and Lower Print Stations** house the print head assemblies. They have knobs for adjusting print head pressure and print density to control the print quality.
- **The Upper and Lower Ink Arbors** are spring loaded, allowing them to open up and self center the ink cores. They accommodate ink rolls ranging from 1

inch - 2 ½ inches with Inch Adapter or from 25 mm – 60 mm with the Metric Adapter.

- **A Rotary Knife Assembly** comes with printer. When printing woven tapes, use a Sonic Knife accessory option that provides ultrasonic cutting and sealing.
- **The Stacker** collects the finished, printed labels. You can adjust it to accommodate a variety of label tapes and short or long labels. Once the stacker reaches the bottom, the printer will stop, indicate the stacker is full, and allow you to remove the labels.
- **The Control Panel** with buttons and LED's indicate printer status and information about specific jobs.

WARNING: This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

2.4.2 Printer Configurations

The Snap 500 comes in 4 configurations, the 2 printheads over 1 printhead, 2 over 0, 1 over 1, and the 1 over 0. Each of these configurations is described below.

- **2 over 1** – The Snap 500 2 over 1 features two print heads over 1 lower print head, capable of printing a two sided label. Two colors on top and one color on the bottom.
- **2 over 0** – The Snap 500 2 over 0 features two print heads, both on top, capable of printing one sided two color labels.
- **1 over 1** – The Snap 500 1 over 1 features two print heads with one on top and one on bottom, capable of printing two sided one colored labels.
- **1 over 0** – The Snap 500 1 over 0 features one upper print head over no lower print head, capable of printing a one color, one sided label .

2.5 Setting up the Printer

2.5.1 Attaching the Stacker

Figure 4: Rotary Knife and Stacker

The stacker and knife are two separate assemblies that can be installed and/or replaced quickly and easily. For information on removing or adjusting the stacker, refer to Section 4.2.

1. Locate the two shafts on the printer below the Rotary Knife assembly (see Figure 4).
2. Slide the stacker onto the two shafts until the backside of the stacker is beyond the tape size to be run. The stacker should go under the Nip Roller Stripper Plate.

NOTE: Be sure to slide the top of the stacker behind the Nip Roller stripping plate.

3. Connect the stacker interface cable extending from the bottom of the stacker assembly into the larger connector on the right side of the printer. Rotating the connector and applying light pressure inward will help engage the connectors.

NOTE: There is a sleeve on the connector that will snap when the connector is fully engaged with the mating connector. The two cables will slide into each other only when the connectors are properly aligned with each other.

2.5.2 Mains Disconnect

WARNING: Before connecting and powering on the printer, you must check to be sure the mains line voltage is 100-240VAC @ 50-60Hz, single phase.

There are no main fuses on the SNAP 500 printer. The line cord is the printer's mains disconnect device.

1. Look at the line voltage level shown on the back of the printer (see Figure 5). If the mains line voltage for your location is within the range limits, you can proceed with setting up your printer.
2. If the line voltage does not match the voltage for your location, contact your local AVERY DENNISON supplier.
 - In the U.S.A., call (937) 865-2123.
 - Outside the U.S.A., please contact your local AVERY DENNISON supplier.

WARNING: Some printers require internal changes when switching the line (mains) voltage from 115V to 230V. Refer to Appendix 1 for instructions. Failure to follow the instructions may result in damage to the printer.

CAUTION: If the number in the window DOES NOT match the AC power line intended to be supplied to the printer, DO NOT plug in the power cord.

WARNING: Attempting to open the AC power entry with the AC power cord already inserted will damage the AC entry.

Figure 5: Right Side of Printer – Rear View

2.5.3 Installing the Power Cord

A quick-disconnect power cord is shipped with each 115V printer. The cord for 115V printers will use the standard three-prong plug used in the U.S.A.

If a power cord is not supplied with your printer, and your printer is operating at a voltage other than 115V, obtain a power cord for your application. The power cord should have an IEC-320-C13 plug on one end and the appropriate plug for your power receptacle at the other end.

1. Locate the AC power entry receptacle on the backside of the printer just below the power switch (see Figure 5).
2. Plug the power cord into the AC power entry receptacle.

2.5.4 Installing the PC Interface Cable

If you will be using your SNAP 500 printer with a personal computer, one of the following computer interface cables is required:

- Null-modem serial cable with Part number 05581139 connector
- USB / Serial adapter – Part number 05581140
- Ethernet adapter – Part number 05591105

1. Locate the communication cable connectors on the backside of the printer (see Figure 6).
2. Plug in the serial cable connection to the serial port.

The default serial port setup in the printer is 115,200 baud, no parity, 8 data bits, 1 stop bit.

Figure 6: Rear View of the Printer

2.5.5 Installing PCMate Platinum Software

The software used to drive the AVERY DENNISON family of printers is covered in a separate manual. The PCMate Platinum software is a Windows® application used to create formats for the SNAP 500 printer as well as all other AVERY DENNISON control printers.

The printer is also capable of operating directly from a mainframe when using the RS232 interface and AVERY DENNISON's command language (PCL).

NOTE: When using PCMate Platinum with virtual control / display interface, the remote control / display module will function. However, it is only needed when the printer is driven by a mainframe computer or other software interface packages.

2.6 Printing a Test Label

2.6.1 Loading Supplies

Before you can print a test label, the printer must be loaded with tape and ink. Refer to section 3.1 for instructions on loading the tape and ink.

2.6.2 Turning the Printer on

1. Turn the power switch on. The power switch is located on the back of the printer, just above the power cord.
2. The four lights on the Printer Control Panel will come on for a few seconds, and then all four lights will start to flash. This indicates that the printer is performing its internal diagnostic tests. After several seconds, the lights will stop flashing and the Ready light will come on. This indicates that the printer is ready.

NOTE: During the power sequence the knife will cycle backwards 1 time to find home and there will be an audible bell as the printer powers up.

3. If any problems occur, see sections 10 and 11, Troubleshooting.

2.6.2 Selecting the Test Format

There are two test formats built into the printer. These are selected using the Option Menu System. The steps below describe how to select one of the test formats. For more information on the Option Menu System, see section 3.4.

When the instructions say to press a button, press the button for a short time and release it. When the instructions say to press and hold a button, press the button and hold it down until the printer responds.

When you are in the Option Menu System, you can get out by pressing and holding the Voice button until the printer says "Returning to print mode."

1. Press and hold the Voice button until the printer says "Press Start for Test Patterns."
2. Press the Start button. The printer will say "Press Start for Test Pattern 1." If you want to print test pattern 1, press the Start Button then go to step 3. If you want to print test pattern 2, press the Voice button. The printer will say "Press Start for Test Pattern 2." Press the Start button.
3. The printer will say "Ready to print test pattern 1 (or 2), Returning to print mode." At this time the Data light will come on. The printer is now ready to print the test labels.

2.6.3 Printing the Test Labels

1. Press the Start button. The stacker (if installed) will move the platform to its start position and the printer will begin printing the test labels.
2. If any problems occur, either the Supply or Error light will come on. If this happens, press the Voice button and the printer will say a message telling what the problem is. Correct the problem and press the Start button again. Repeat this until the printer runs continuously.
3. If you can't get the printer to run, refer to sections 9 and 10 troubleshooting.

3.0 Operation

3.1 Loading Supplies

Your SNAP 500 printer is designed with up to three ink supply stations, as many as two upper and one lower. The ink supply station setup is dictated by the option of the printer you ordered. There is no way to change this setup at your location.

The ink arbors have a spring-loaded latch, which automatically centers the roll of ink to ensure smooth tracking through the printer. Ink ribbon cores based on the metric system, use the gray arbors; inch uses black arbor.

The ink cores have spines on their inside surfaces which align with the grooves in the ink arbors. Spines allow the printer to control the tension of the ink ribbon during printing, minimizing wrinkling and optimizing print quality.

NOTE: Only use the white plastic cores on the SNAP printers. If you have a black plastic core they are design for the Avery Dennison 9800 series printers.

3.1.1 Installing Ink to the Top Ink Supply Station(s)

1. Install an empty ink core on the upper ink rewind arbor. Ensure the core is the same width as the core of the ink being used.

NOTE: The empty ink core should be the same width as the ink supply roll.

- a. Press the latch and rotate the core slightly to align the spines with the grooves on the arbor. Slide it gently onto the arbor. Release the latch as soon as the core starts to slide on the arbor.
- b. As you slide the core onto the arbor, you will hear a clicking noise as the latch ratchets onto the core. When the core is centered on the arbor, it will stop. See Figure 7.

CAUTION: To avoid damaging the print head, the ink supply roll should be ¼ inch (6 mm) wider than the supply tape.

Figure 7: Upper Ink Supply and Print Stations - Unloaded

NOTE: The ink system is designed to rewind one roll of ink at a time. When the rewind core is full, replace it with an empty ink core. Do not try to add a second roll to the first rewind core, since it will not track through the printer correctly and will result in poor print quality.

2. Remove the plastic packaging around the roll of ink and install it on the ink supply arbor. Ensure that the leading edge is pointing toward the Tape Arbor.

NOTE: For best results, leave the ink roll wrapped in plastic until you are ready to use it in the printer.

3. Open the print roller (See Figure 8).
4. Pull the ink down and to the right, beneath the turn bar, between the upper print roller and the upper print station, toward the stacker side of the upper ink rewind arbor.

Figure 8: Upper and Lower Ink Supply and Print Stations - Loaded

4. Fasten the ink supply to the rewind core.
 - a. If you are using a new roll of ink, the leader you are advancing through the machine already has adhesive on it. Press the leader onto the rewind core until it sticks to the core.
 - b. If you are installing a partially used roll of ink, you must first attach a small piece of transparent tape to the leading end of the ink roll. Then, tape the end to the ink on the rewind core.
5. Wind the core for several turns to make sure the ink tracks flat as it is pulled through the printer.
6. To remove an ink core from the arbor, depress the latch and slide the core from the arbor. Save the empty core to be used as the next rewind core.

3.1.2 Installing Ink to the Bottom Ink Supply Station

Installing Ink on the Bottom Print Station is done in the same way as the Top Print Station(s), except that the ink runs up over the turn bar, across the print head to the rewind arbor.

3.1.3 Loading the Stock

Before loading a roll of stock, you will need to be familiar with the following parts of the SNAP 500 printer (Refer to Figures 9 and 10).

The **Stock Arbor** is designed to clamp the core of the supply rolls to hold them in place during printing operations. This function provides back tension which helps keep the stock straight while it moves to the center of the print head. By rotating the stock arbor knob, you can adjust for roll widths ranging in size from ½ inch - 2 ¼ inches (12.7 mm – 57.2 mm). To function properly, the stock roll must be wound firmly and centered on the core with no telescoping of the roll. You do not need to make any other adjustments.

The **Stock (Web) Guide** is located between the Tape Unwind Arbor and Lower Print Station and guides the tape through the machine toward the print head. The black knob located above the tape (web) guide controls the width of the guides. Turning the knob clockwise will widen the guides, while counterclockwise turns will narrow the web guides. Adjust so that the guides are just touching the edges of the tape.

The **Upper and Lower Print Stations** on the SNAP 500 printer are stationary. The rollers swing open and closed for threading and printing. These rollers are held in position for printing with latches on both the inside and outside end of the rollers.

NOTE: If you are printing two-sided labels, both print rollers must be closed in order for the printer to operate. If a two-sided label design is sent to the printer and the lower print roller is open, the Error LED will light up and the printer will stop. If you are printing single-sided labels, the lower print roller should remain open so the ink rolls will not rotate.

The **Feed / Auxiliary Feed** is the assembly located in front of the knife. It works by pulling the tape through one or all of the print heads and into the Knife and Nip rollers. The Feed has a knob, which is used to manually advance the material through the knife, the nip roller, and into the stacker. The Feed Assembly has a small set of rollers on the exit side of the assembly. This is the Auxiliary Feed. They work with the main Feed Assembly to maintain proper tension of tape as it moves through the printer.

New supply rolls are sealed and packaged individually. When you are ready to load the tape, follow the steps below.

1. Remove the plastic packaging and discard.

2. Remove the tape holding the end of the supply to the outer part of the roll. To avoid damaging the rollers or print heads, use scissors to cut off any portion of the supply that has adhesive on it.
3. Rotate the Tape Unwind Arbor Knob counterclockwise to retract the “fingers”.
4. To install the supply roll, begin with the leading end at the top of the roll leading towards the stacker.
5. Slide the stock roll onto the Stock Arbor (see Figure 9).
6. Rotate the Stock Arbor knob counter-clockwise quickly to extend the fingers that hold the supply roll in place.
7. With all print rollers in the open position, pull the stock from the top of the supply roll.

Figure 9: Tape Supply Though Print Stations

8. Pull the roll of stock to the right of the Stock (web) Guide.
9. Continue threading the stock between the print rollers and printheads, through the Feed Roller and up to the Auxiliary feed.
10. Rotate the Auxiliary Feed Knob counterclockwise and advance the stock through the Knife and Nip Rollers and into the Stacker (until it extends about ½ inch or 10 mm - 15 mm from the rollers).
11. If the stock will not advance through the knife, refer to Section 5.4.2, Knife Home Position Adjustment.

12. Remove slack from the supply roll and the tape running through the printer. Starting with the right-most printhead, close the print rollers in order moving from right to left. Ensure there is no slack between any roller.
13. Rotate the Stock (Web) Guide Knob to align it to the stock width.
14. Tighten the Stock Arbor Knob to apply tension to the stock.

Figure 10: Tape Supply through Knife and Stacker

3.1.4 Butt Splice

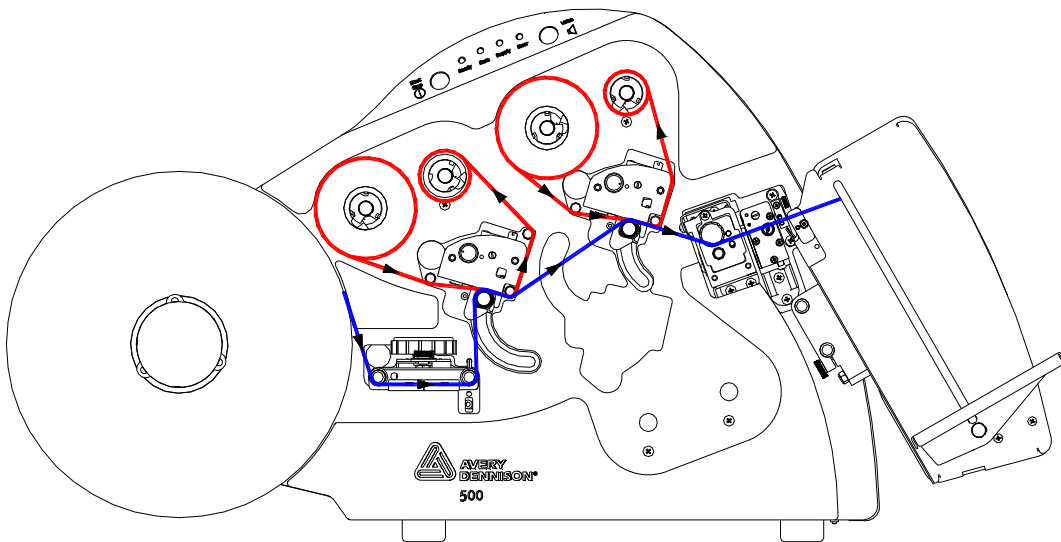

CAUTION: To prevent damage to the print head, do not use butt splices.

The SNAP 500 printer is designed to allow for fast, frequent changing and loading of tape and supplies. We recommend re-threading the tape rather than to using a butt splice. If you determine that splicing is faster for threading, tape the ends of the stock together. Turn the feed roller and advance the splice through the printer. Do not try and run the splice through the printer as it can cause damage.

3.1.5 Threading Diagrams

Snap 500 1 over 1

Snap 500 1 over 0

3.2 Sending a Print Job to the Printer

In order to print labels, you must send a print job to the printer. The print job tells the printer what label to print, what information to print on the label, and how many labels to print.

Getting a print job to the printer depends on how your company system is set up. You may be using AVERY DENNISON's label design program PCMate Platinum, or you may be using a special application on a PC or a mainframe. Consult your supervisor on how your company sends print jobs.

3.3 Printing Labels

3.3.1 The Control Panel

The Control Panel on your SNAP 500 printer is located at the top of the machine. Figure 11 shows the control buttons and lights displayed on the printer. The buttons allow you to control the printer, and the lights indicate the status of the printer.

- The **Start/Stop Button** is a blue button that starts and stops printing. If there are labels ready to print, pressing the Start/Stop Button starts printing. If the printer is running, pressing the Start/Stop Button stops printing.
- The **Ready Light** is a green light that indicates the printer has been powered up, completed its diagnostics, and is ready to accept print jobs.
- The **Data Light** green light that indicates you have sent a print job to the printer and it is ready to print. If the Data Light is flashing, you are at end of day (see section 3.3.4).
- The **Supply Light** is a yellow light indicates that: either the tape or ink supply has run out and needs reloading or the stacker is full. It may also come on if you have an accessory attached and there is a problem with it.
- The **Error Light** is a red light that indicates a problem exists somewhere in the printer.
- The **Voice Button** is a yellow button and will play a message describing the status of the printer. Use it to determine causes of printer issues. If the printer is printing, pressing the Voice Button will stop printing.

Figure 11: Control Panel

3.3.2 Printing

Once a print job has been sent to the printer, the Data light will come on. You can then press the Start/Stop Button to start printing.

When printing starts, the stacker will move the platform to the correct position. Then the printer will start printing labels.

As the printer prints, the cut labels will drop onto the top of the stack. As the stack grows, the stacker platform moves down so that the top of the stack stays in the same position.

3.3.2.1 Handling the Leader

When you start printing for the first time, or after some errors, the printer will create a leader. The leader is a longer piece of material that may be blank or may have some partially printed labels. These labels are not usable and are not part of the print job.

When the printer creates a leader, grab it as it comes out of the nip rollers and pull it out of the stacker when the printer does the first cut. (If you are not using the stacker, or you are using some other accessory such as a rewinder, allowing the labels to fall into a box, you may need to handle the leader differently.)

3.3.3 Errors

If the printer encounters a problem during printing, it will stop printing and either the Supply or Error light will come on. The Supply light means that there is a problem with either the ink or the tape or the stacker is full. The error light means that there is some other problem with the printer.

There are two ways to determine what the problem is:

1. Press the Voice button. A message will play that describes the problem.

2. The problem will be displayed in the Printer Status box on the Virtual Control Panel in PCMate Platinum. See section 8.0 for a description of the Virtual Control Panel.

Correct the problem and press the Start/Stop Button to start printing again.

NOTE: If the error condition no longer exists, the printer will start. It is not necessary to press the Start/Stop button twice as is required with previous AVERY DENNISON printer models. If the error continues to recur, contact your local AVERY DENNISON representative.

3.3.4 End of Day

When the printer finishes printing all the print jobs that have been sent, it will stop with a few labels left to print. The Data Light will flash. Sending another print job will allow the printer to continue printing without producing a leader. The feature helps prevent wasting stock and ink.

If all the jobs are finished or you need to change stock and/or ink and the data light is flashing, press the Start Button. The printer will print the last few labels of the last print job. You can then turn off the printer or change the stock and ink for the next print job.

3.3.5 Clearing Print Jobs

If you have sent print jobs to the printer and do not want to print the labels, press and hold both the Start/Stop and Voice buttons simultaneously. After about 2 seconds, the printer will say "Clearing Current Batch." If there is only one print job, the Data light will go out.

If there is more than one print job and you only want to clear the current one, release the buttons.

If there are more than one print job and you want to clear them all, continue to hold the buttons until the printer says, "Clearing All Batches."

3.3.6 Using Pre-Printed Stock

When using pre-printed stock, the printer must detect a sense mark on the tape in order to print in the proper place.

- The SNAP 500 printer comes with a top reflective sensor standard. This sensor, mounted in the top-right-hand post of the web guide, detects a black sense mark on the top surface of a white tape. The sensor cannot be moved from the center position.
- A hole sensor is an option. This sensor will detect a hole or slot either centered on the stock or 1/4" from the inboard edge of the stock.
- A contrast sensor is also an option. This sensor will detect a colored sense mark on the top surface of a colored tape. When installed, it is mounted on the top left-hand post that holds the web guide. It is movable

across the web, so that the sense mark does not have to be centered on the tape.

3.3.6.1 Selecting the Sensor

The registration sensor type can be selected in one of two ways. First, the sensor type can be selected as part of the format (see the PCMate Platinum manual or the PCL manual for details).

The sensor type that is selected in the format can be overridden using the Virtual Control Panel (see section 8.0).

The printer does not know if the optional hole or contrast sensor is installed. If one of these sensors is selected but not installed, the printer will not operate properly.

3.3.6.2 Aligning the Stock to the Sensor

In order to work properly, the stock must be aligned to the sensor before starting to print. To do this, open the print-head rollers and use the Feed knob until the sense mark is just to the left of the sensor. Then rotate the rewind ink arbors to take up any slack and press the Start/Stop Button and close the appropriate print-head rollers.

This alignment must be done only the first time you print after power up, or after a “missed sense mark” error. Do not align the tape after a normal stop or a stacker full.

3.3.7 Feeding the stock

To feed the tape, press and hold the Start/Stop button. After a short delay, the printer will feed tape through the printer. To stop the feed, release the Start/Stop button.

If you are in the middle of printing a batch, feeding the tape will cause the printed labels between the printhead and the knife to feed through without cutting. These labels will be re-printed the next time you start printing. The batch quantity will be correct.

3.4 Option Menu System

The Option Menu System allows you to

- Print test labels
- Set the voice volume.

When the instructions say to press a button, press the button for a short time and release it. When the instructions say to press and hold a button, press the button and hold it down until the printer responds.

When you are in the Option Menu System, you can get out by pressing and holding the Voice button until the printer says "Returning to print mode."

Use the Start/Stop and Voice buttons to move through the Option Menu System. Each time you press a key, a voice message will follow, or the machine will initiate or stop an action. Regardless of which of the three functions you want to select in the Option Menu System, you select it the same way:

1. Press and hold the Voice button for about two seconds.
2. The Voice message will say, "Press Start for Test Pattern."
3. If you do not want to run a test pattern, press the Voice button.
4. The voice message will say, "Press Start for Demos."
5. If you do not want to listen to the demos, press the Voice button.
6. The voice message will respond with, "Press Start to Set Volume."
7. If you do not want to change the speaker volume, press the Voice button.
8. The printer will say "Returning to Print Mode." At this time the Option Menu System is complete and the printer is back to normal operation.

For more information on how to use each of the three possibilities in the Option Menu System, refer to Sections 3.4.1 Running Test Labels; 3.4.2 Using Voice Demos; and 3.4.3 Setting /Adjusting Voice Button Volume. Appendix 8 contains a flowchart of the Option Menu System.

3.4.1 Running Test Patterns

Your SNAP 500 printer offers you two test patterns to run before you proceed to production.

Test Pattern 1, consisting of a solid line down the middle on the front and back of the label and a solid line across the web that is exactly 1" from the cut. This test pattern is helpful in adjusting your print position to compensate for mechanical tolerances in the printer.

Test Pattern 2 more closely resembles an actual label and can be used to make adjustments to the print head pressure and contrast (see sections 4.1.1 and 4.1.2).

When you have determined which Test Pattern you wish to operate, use the appropriate procedure.

NOTE: The printer is set up to print the selected label test format in a very large quantity. You must manually start and stop the printing to make any necessary adjustments and to end the test run.

Test Pattern 1

1. To run a test label, press and hold the Voice button about two seconds. The voice message will say, “Press Start for Test Pattern.”
2. Press the Start/Stop Button. The voice message will say, “Press Start for Test Pattern 1.”
3. Press the Start/Stop button. The voice message will respond with, “Ready to Print Test Pattern 1. Returning to Print Mode.” The Data light will turn on.
4. Press the Start/Stop button. The machine will begin printing Test Pattern 1.
5. To stop printing the test labels, press the Start / Stop button. The Data light will remain on. Make any necessary adjustments, and press Start / Stop to resume printing the test labels.
6. Once satisfied with the test label you are running, press either the Start / Stop or Voice button to stop the test run. The Data light will remain on.
7. Press and hold the Start/Stop and Voice buttons simultaneously to clear the current batch of labels being printed.
8. The voice message will say, “Clearing Current Batch.” The Data light will go out.

If you want to run Test Pattern 2, you must first clear the batch, and begin with Step 1 for Test Pattern 1.

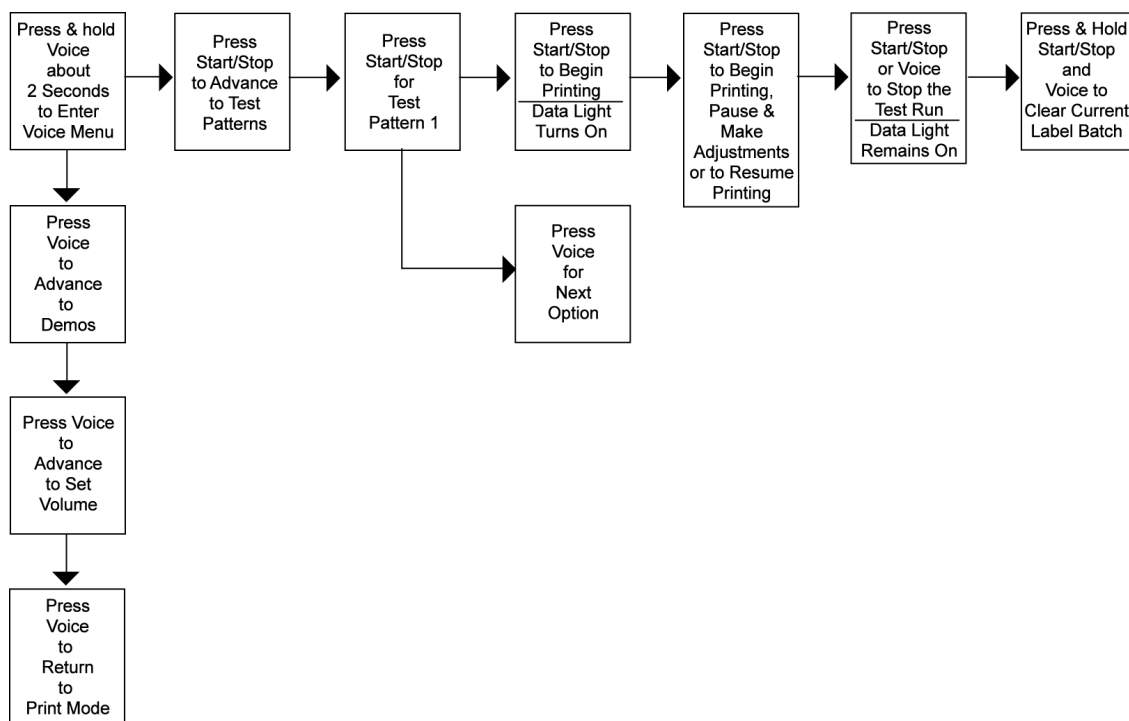

Figure 12A: Running Test Patterns

Test Pattern 2

1. Press and hold the Voice button for about two seconds. The voice message will state, "Press Start for Test Pattern."
1. Press the Start / Stop button. The voice message will state, "Press Start for Test Pattern 1."
2. Press the Voice button.
3. The voice message will say, "Press Start for Test Pattern 2."
4. Press the Start / Stop button. The voice message will say, "Ready to Print Test Pattern 2. Returning to Print Mode." The Data light will turn on.
5. Press the Start / Stop button. The machine will begin printing Test Pattern 2.
6. To stop printing the test labels, press the Start / Stop button. The Data light will remain on. Make any necessary adjustments, and press Start / Stop to resume printing the test labels.
7. Once satisfied with the test label you are running, press either the Start / Stop or Voice button to stop the test run. The Data light will remain on.
8. Press and hold the Start / Stop and Voice buttons simultaneously to clear the current batch of labels being printed.
9. The voice message will say, "Clearing Current Batch." The Data light will go out.

3.4.2 Setting / Adjusting Voice Button Volume

The volume level of the voice messages on your SNAP 500 printer is set at Level 3 at the factory. If you want to adjust the voice button's volume setting on your printer, follow the steps listed below.

NOTE: When you select volume setting, the menu will begin with the current volume at which your machine is set, Level 3.

1. Press and hold the Voice button longer than two seconds to activate the Option Menu System.
2. The voice message will say, "Press Start for Test Pattern."
3. Press the Voice button. The voice message will say, "Press Start for Demos."
4. Press the Voice button. The voice message will say, "Press Start to Set Volume."
5. Press the Start / Stop button. The voice message says, "Press Start for Volume Level 3."

To increase from volume level 3 to 5, follow these additional steps.

6. Press the Voice button. The voice message says, "Press Start for Volume Level 4."
7. Press the Voice button. The voice message says, "Press Start for Volume Level 5."
8. Press the Start/Stop button. The voice message says, "Volume Set to Level 5. Returning to Print Mode."

NOTE: Each time you press the Start/Stop button, the volume level will increase by one increment until the maximum level is reached.

If you want to decrease the voice volume to Level 1 or 2, follow Steps 1-7 above and continue to press the Voice button until you reach the desired volume level.

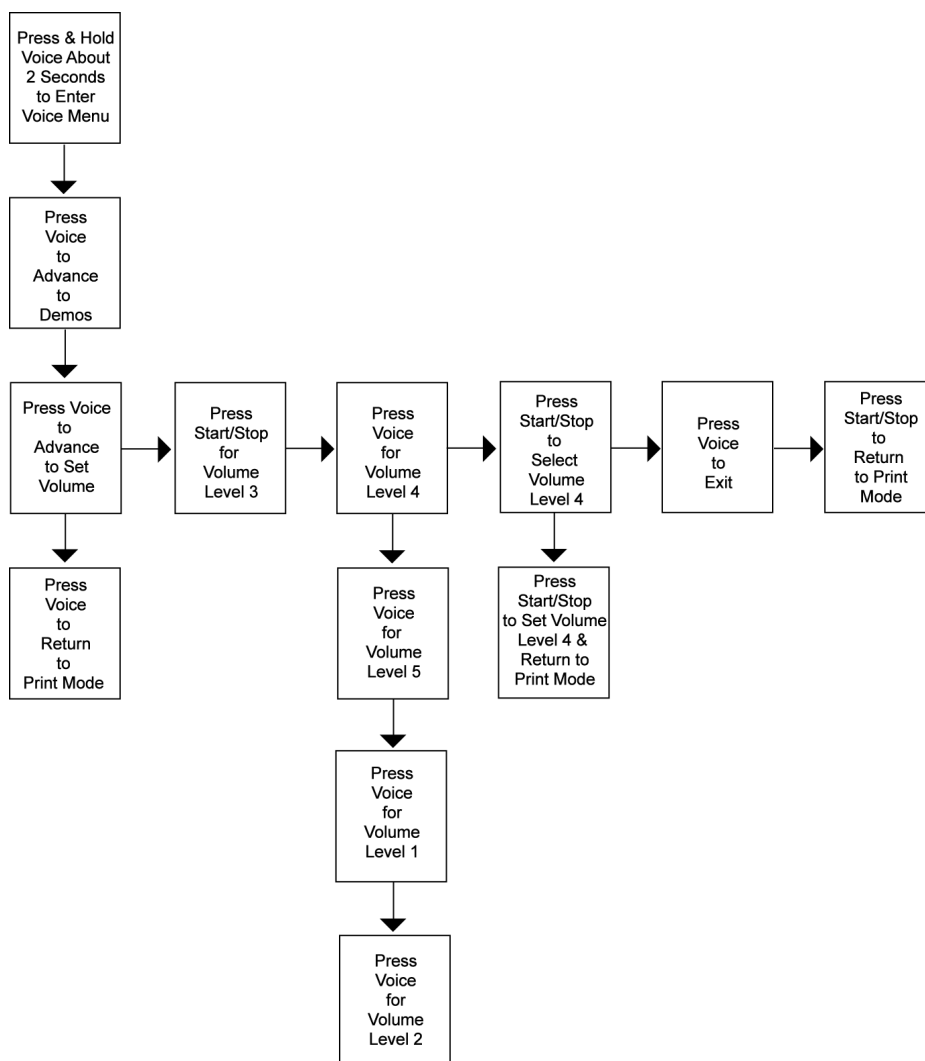

Figure 12B: Adjusting Voice Volume

4.0 Making Adjustments

4.1 Print Head Adjustments

The one, two, or three print stations on the SNAP 500 printer are stationary. The print rollers swing open for loading stock and ink and close when the machine is printing. The rollers are held in the print position with a latch on both the inside and outside end of the rollers.

When printing labels, there are two adjustments: (1) print head pressure, and (2) contrast, which controls print darkness (density).

4.1.1 Adjusting Print Head Pressure

Each print head has two print head pressure buttons, (see Figure 13). Adjust print head pressure as follows:

CAUTION: For extended print head life, use the lighter print pressure setting whenever possible.

1. Decrease print head pressure: use a flat blade screwdriver to depress both buttons and turn them $\frac{1}{4}$ turn (90 degrees) counterclockwise until they are in the upper position.
2. Increase print head pressure: use the flat blade screwdriver to depress both buttons and turn them clockwise until they are in the lower position.

CAUTION: Ensure that both buttons on the print head are in the same position.

The buttons do not rotate except 90 degrees back and forth to the desired setting.

Figure 13: Print Head Components

4.1.2 Adjusting Density (Darkness)

The contrast knob for adjusting print density (darkness) is located on the outboard end of each print head housing (see Figure 13). You may adjust the contrast knob while printing labels.

The nominal contrast setting is in the center of the rotation.

1. To increase print density, rotate the contrast knob clockwise.
2. To decrease print density, rotate the contrast knob counterclockwise.

You can manually rotate the contrast knob 270 degrees. At maximum value, the print will not become any darker. In fact, it may actually begin to get lighter.

CAUTION: For extended print head life, use the lowest print contrast the produces acceptable print quality.

4.2 Adjusting the Stacker

The stacker on your SNAP 500 printer is adjustable in three ways:

- 1) the stacker position on the mounting pins,
- 3) the stacker angle at which labels accumulate in the stack, and
- 4) the platform angle.

You may need different settings depending on the label size and material. Feel free to make adjustments until you are satisfied with the stacking. That way you will soon learn the settings that work best for your labels.

4.2.1 Stacker Position

The stacker slides front and back on the mounting pins allowing its proper positioning for the width of the label. Set the back wall of the stacker just behind the back corner of the label where it comes out of the nip rollers.

The stacker mount bracket has a thumbscrew that locks the stacker in position and stiffens the mounting.

Adjusting the stacker angle (see section 4.2.3) will move the position of the back wall. If you adjust the stacker angle, be sure to readjust the stacker position.

4.2.3 Stacker Angle

The angle of the stacker can be tipped out a maximum of 20 degrees at the bottom from the vertical position shown in Figure 5. Adjust the stacker angle to best accommodate each run.

1. When the label is 2 inches (51 mm) or longer, or when using coated tapes, the stacker works well with the bottom tipped out.
2. When using woven tapes, the stacker should be vertical or almost vertical.

Figure 14: Stacker Angle – Almost Vertical

4.2.4 Platform Angle

Adjust platform angle to alter the angle at which labels are stacked and stopped.

1. Loosen the Adjustment Thumb Screw and move the platform from a horizontal to a backwards angle approximately 20 degrees up on the outer end of the platform.
 - a. For satin labels, use the lower position.
 - b. For coated labels, and short feed labels, elevate the outer end.

The label stop helps position the labels in the stack. The label stop is magnetic. Follow these steps to adjust the position of the label stop.

2. Place a cut label on the stacker platform and slide it into the back corner.
3. Move the label stop to within 1/8 inch (3 mm) of the end of the label.

Figure 15A: Stacker Platform Angle Adjustment

4.2.2 Height of Stack - Stacker Sensor

1. The stacker has an electronic sensor that automatically determines where the top of the stack. There is no adjustment for the stacker sensor.

Figure 15B: LED Locations

4.3 Print and Cut Adjustments

The print and cut adjustments allow compensation of mechanical tolerances in the printer. Adjustments allow the correct print and cut position without changing the format being sent to the printer.

4.3.1 Cut Adjust

NOTE: The cut adjust should only be made when using pre-printed tape (see section 3.3.6). If the cut adjust is changed when you are using blank tape, the print will appear to move on the label.

If you use pre-printed stock, do the cut adjust using the pre-printed stock and then do the print adjust using either pre-printed or blank stock.

If you never use pre-printed stock, set the cut adjust to zero.

The cut adjust will help the printer cut in the right place with relation to the sense mark on pre-printed tape.

The cut adjust may be changed using the Virtual Control Panel (sec. 8.0) in PCMate Platinum. In the Virtual Control Panel, the cut adjust is found on the Options tab in the Show Settings window.

When the cut adjust is set correctly, the printer will cut the label at the leading edge of the sense mark. If the cut is not in the right place, increase the cut adjust value to move the cut to the right (looking at the printer) or decrease the value to move the cut to the left. Each step is 0.003"/0.076mm.

4.3.2 Print Adjust

The print adjust allows you to move the print with relation to the cut. There are up to three print adjusts, one for each print station.

The print adjust may be changed using the Virtual Control Panel (section 8.0) in PCMate Platinum. In the Virtual Control Panel, the print adjust is found on the Options tab.

The best way to set the print adjust is to use Test Pattern 1 (see section 3.4.1). The test pattern has a line printed across the tape that is 1" from the cut. Run a few labels and measure the distance from the cut to the line. Then, increase the print adjust value to move the print to the right, or decrease the print adjust value to move the print to the left. Each step is 0.003"/0/076mm. Repeat until the line is in the correct place.

NOTE: It is common practice to use the print and cut adjusts to "fine-tune" a format. If you do this, you will have to do it for each format that you use. A better approach is to correct any print position problems in the format, and to use the Sense To Cut option to move the cut if necessary. Refer to the PCMate Platinum manual for details.

4.4 Printer Features

The SNAP 500 printer has many features you can control by the operator. Select each of these features from the Virtual Control Panel (see section 8.0). Unless otherwise noted, locate these features on the Options tab on the Show Settings window. Refer to the sections on the Virtual Control Panel for instruction on how to access these settings.

4.4.1 Selecting the Printer Language

The SNAP 500 printer has the capability of presenting both text and voice messages in multiple languages.

The printer is shipped with several languages installed. When performing an upgrade, however, the Operating System (OS) upgrade file contains only the English language messages. A separate language upgrade is required to add any new prompts in other languages.

In the Virtual Control panel, access the Options tab. To select the printer language, click on the arrow in the Language box to drop down a list of available languages. Click on the desired language. Then click on Apply or Close to activate the selected language.

Selecting the printer language does not change the PCMate Platinum language. See the PCMate Platinum manual for information about changing languages.

4.4.2 Setting the Date and Time

The SNAP 500 printer has a built-in clock and calendar. You may change the date and time as follows:

In the Virtual Control Panel, access the Options Tab. The current printer date and time is shown. You may change the values in the Date or Time box, or you can simply click on the Sync to PC button to set the printer to the same date and time as the PC. Click on Apply or Close to set the printer date and time.

4.4.3 Enabling or Disabling the Cutter

You may disable the cutter in order to use an accessory such as a Rewinder. If the cutter is enabled, it will cut according to the Cut Count selected in the format. If the cutter is disabled, it will not cut between labels.

If you have an optional Sonic Knife installed, it will be also be enabled or disabled using this command.

In the Virtual Control Panel, access the Options Tab. Click on the arrow in the Cutter box. Select Enabled to run the cutter or Disabled to turn the cutter off.

4.4.4 Selecting the Print Speed

The print speed is normally set in the format. You may override the format setting and specify the speed you want the printer to run. This is useful if you have formats that were designed for other AVERY DENNISON printers.

In the Virtual Control Panel, select the Options tab. Click on the arrow in the Print Speed box to drop down a menu of print speed choices. Click on the desired choice and click on Apply or Close to set the print speed.

The available choices are:

- Format – use the print speed specified in the format. If the print speed does not exist in the SNAP 500 printer, it will use the closest print speed that is not greater. For example, if the format was designed for a 676 printer and calls for 5 ips, the SNAP 500 printer will use 4.5 ips.
- Translate – uses the corresponding speed from the printer specified in the format. For example, if the format was designed for a 676 printer and called for 5 ips (the third speed in the printer's speed list of 3, 4, and 5 ips), the SNAP 500 printer would use 6 ips, which is the third speed in its speed list of 3, 4.5, 6, and 7 ips.
- 3, 4.5, 6 or 7 – selects the desired print speed.

4.4.5 Selecting the Flagging Mode

This selection allows you override the flagging mode specified in the format. It is set in the same way as the Print Speed.

The available selections are:

- Format – uses the flagging mode specified in the format
- Side-step – This selection is for the High Volume Stacker, which is not available for the SNAP 500 printer. Do not select this.
- Disabled – Disables flagging. No flagging will be done.

4.4.6 Selecting the Sense Mark Type

This selection allows you to override the sense mark type (none, top reflective or bottom reflective) selected in the format. Its main purpose is to allow you to activate the optional Contrast Sensor, since older formats or formats for other AVERY DENNISON printers will not have the Contrast Sensor type.

This option is set in the same way as Print Speed.

The available selections are:

- Format – use the sense mark type specified in the format
- Top Reflective, Bottom Reflective, Contrast – selects the sensor type
- Disabled – ignores the sense mark. This is useful when designing a format using blank tape to avoid wasting the more expensive pre-printed tape.

The printer does not know whether the Bottom Reflective or Contrast Sensor is installed. If you select a sensor type that is not installed, the printer will not print properly.

4.4.7 Setting the Default Transfer Type

The transfer type specifies the type of tape and ink that is being used. For example, transfer type 97 is 4800TWT fabric with CT1111 ink. The transfer type tells the printer how much energy is needed to print when using that tape and ink. See Appendix 2 for a list of available transfer types.

Be sure to specify the transfer type in the format. However, if a transfer type is not specified in the format, the printer uses the default transfer type.

PCMate Platinum always includes the transfer type in the format. If you are using PCMate Platinum, you do not need to specify a default transfer type.

The default transfer type is selected the same way as Print Speed.

4.4.8 Viewing the Life Counts

The SNAP 500 printer maintains a count of the total number of labels printed, and the total number of inches of material. Also, there is a resettable label counter.

In the Virtual Control Panel, the Life Counts can be found in the Life Counts/Software Version tab. To reset the resettable label counter, click on the Reset button.

5.0 Maintenance

5.1 Print Head Cleaning and Handling

NOTE: AVERY DENNISON recommends cleaning print heads as follows:

1. With alcohol and a cotton pad or cloth every 2-4 hours of continuous usage;
2. With alcohol and Velcro cleaning pads after 8 hours of use.

Clean print heads regularly and handle them properly to avoid damage and extend life. Follow this cleaning schedule.

- After two to four hours of continuous usage, wipe the print heads with alcohol and a cotton pad or cloth.
- After eight hours of continuous operation, conduct a more vigorous cleaning. Use alcohol and a Velcro cleaning pad, such as those supplied with each new print head.

5.1.1 Handling Techniques

Static discharge can easily damage thermal print heads. To avoid a static discharge, follow these procedures.

1. Keep all print heads in their original anti-static bags until they are ready to be installed in the printer.
2. Wear an anti-static wrist strap to prevent static discharge from your body into the printer, when working with a print head. Fasten the clip end of the anti-static wrist strap to a metal portion of the printer (usually the stacker) to prevent static from your skin from entering the print station.
3. Wear anti-static gloves at all times when handling print heads to prevent oils on your hands from contaminating the print head. The SNAP 500 printer spare parts kit contains an anti-static wrist strap and gloves.
 - a. If your company has not purchased the spare parts kit, buy the anti-static wrist strap at your local electronics store.
 - b. Order extra anti-static gloves from AVERY DENNISON.
 - c. If an anti-static glove is not available, thoroughly wash and dry your hands before handling the print head.
4. Do not touch any terminals extending from the print head or the print line.

CAUTION: Never remove the print head from the printer except to replace it.

Optimal print quality and print head life come from:

1. Using clean supplies.
2. Using alcohol and the loop side of a Velcro pad or a cotton pad to clean the print head.
3. Never using anything abrasive to the print head.
4. Never using anything metallic on or near the print head.

5.1.2 Cleaning Procedures

CAUTION: AVERY DENNISON recommends Master Cleaning Kit #921341K for use in cleaning print heads.

1. Before cleaning any part of your SNAP 500 printer, turn off the power.
2. Following handling techniques recommended above.
3. After 2 to 4 hours of continuous use: Apply a liberal amount of alcohol to a cotton pad and rub firmly across the print line of the print head several times to remove any build-up of ink, dust, dirt or debris. Wait a few minutes for the alcohol to evaporate, and resume printing.
4. After 8 hours of use: Apply a liberal amount of alcohol to the loop side of a Velcro pad and rub firmly across the print line of the print head several times to remove any build-up of ink, dust, dirt or debris. Wait a few minutes for the alcohol to evaporate, and resume printing.
5. Clean the print rollers and auxiliary feed rollers with alcohol and a cotton pad to remove any ink, dust or dirt build-up.
6. Clean sensors with a dry cotton or foam swab.

CAUTION: Do not use alcohol to clean sensors.

5.2 Print Head Replacement

When you see voids in the printing, and print quality does not improve, even after cleaning the heads, it is time to replace the print heads. Follow the procedures listed below.

1. Turn off the power to the printer.
2. Remove the tape and ink supplies from the printer for easier print head removal.

WARNING: Before replacing a print head, review the Print Head Handling Procedure Sheet packaged with each print head to determine if any procedures have changed.

3. Follow handling techniques listed above.

Figure 16: Print Head Components

4. Wearing your anti-static gloves, unplug the cables that connect to the print head by grasping the print head cable, rocking it gently (see Fig. 17a). Depressing the two grey tabs on the top of the print station (see Fig. 17b). Reach underneath and remove the print head assembly from the print station.

Figure 17a. Unplugging Print Head Cable

Figure 17b. Two Tabs on Print Station – Depressed

Figure 17c. Print Head Assembly – Removed

Figure 17d. Inserting Print Head Assembly

Figure 17e. Print Head Assembly

Figure 17f. Print Head

5. Place the new print head assembly onto the plastic mount bracket underneath the print station (see Fig. 17c and 17d). Push it up until it clicks into position.
6. Reconnect the print head cable connectors, making sure that the connectors are seated tightly.

WARNING: If the cables are not connected correctly, the print head will be destroyed when the power to the printer is turned on. Check to see that the cable is tight by observing from underneath the print head. The cable's connectors should be inside of the connectors located on the print head.

7. Replace the tape and ink supplies, and double-check your work.
8. Turn on the power to the printer.
9. As a final test, make a test run to check the print quality of the labels.

5.3 Lubrication

The SNAP 500 printer has ball bearings that do not require lubrication. However, there are two (2) oil-impregnated bronze bushings in the auxiliary rollers of the feed assembly that do require lubrication.

Figure 18a: Lubrication Locations

Caution: AVERY DENNISON recommends lubricating the bronze bushings with one drop of multi-use oil once every month during normal operation.

5.4 Rotary Knife Assembly

The rotary knife assembly for the SNAP 500 printer sets into a groove in the mounting bracket and is locked in place with a single screw. You can expect an average of two million cuts if you are cutting with woven tapes and four million cuts if you are cutting coated tapes. Knife life decreases when foreign objects are inserted into the assembly.

There are no field replacement components. When the blades become dull, replace the rotary knife assembly. Replacement knife assemblies are sold ready to install with no adjustments required.

5.4.1 Removing and Replacing the Knife Assembly

WARNING: When adjusting, removing, or replacing the knife assembly, you must turn off the power to the printer to avoid personal injury.

1. Turn off the power to the printer.
2. Using the Feed Roller knob, back the tape out of the knife.
3. Using a Phillip's head screwdriver, loosen but do not completely remove, the retaining screw on the outboard end of the knife (see Fig. 18a). Leave the

retaining screw in the assembly so you will have a place to lift the outboard end of the assembly.

4. Place your right index finger on the head of the retaining screw and your thumb on top of the assembly and lift up. This will remove the key that is machined into the knife base from the groove in the mounting bracket (see Fig. 18b).
5. Slide the knife straight out until the stripper contacts the outer support. This will pull the rotary knife shaft from the motor drive coupler and the mounting screw out of the clamp slot.
6. Lift the knife assembly vertically from the printer.
7. Remove the retaining screw from the used knife assembly and insert it into the new knife assembly.

Figure 18b. Outboard End View of Knife

Figure 18c. Removing Knife Assembly

WARNING: Keep your fingers out of the knife assembly to avoid personal injury.

8. Properly dispose of the used knife assembly.
9. To insert the new knife assembly, slide it down vertically into the space between the Auxiliary Feed and the Nip Rollers.
10. Hold the knife assembly on the upper outboard corner. Use a flat blade screwdriver to rotate the rotary knife blade with the screw slot in the knife until the knife blade slips into the drive shaft.
11. Continue to hold the knife assembly in place. Use a Phillip's head screwdriver to retighten the screw.

12. Turn on the power to the printer and allow the knife to return to home position.
13. Rethread the tape through the Auxiliary Feed, Nip Roller, and knife.

5.4.2 Adjust the Knife Home Position

To adjust the Knife Home Position, follow the procedure listed below.

1. Insert a flat blade screwdriver into the slot in the end of the knife.
2. Rotate the screwdriver counterclockwise until you hear an audible click.
3. Continue to turn the screwdriver approximately 1/8 of a rotation more.

5.5 Knife Blade Cleaning

Occasionally knife blades will become dirty from buildup of coated tapes affecting knife performance. This may cause material to loop between the feed and knife mechanisms. In order to restore knife to original operating condition build up on blades must be removed.

- Coatings will build up at different number of cuts depending on material being cut.
- Coatings that are thicker and softer may require more frequent cleaning.
- Woven materials without coatings require less frequent cleaning.

5.5.1 Cleaning Procedure

1. Follow knife removal instructions in section 5.4.1.
2. Remove knife cover by removing 3 screws shown in figures 18d and 18e.

Figure 18d. Front View

Figure 18e. Rear View

3. With knife cover removed use a cotton swab with alcohol and buff off adhesive build up in areas noted in figures 18f and 18g.
4. Do not use metal tools to scrape off buildup that could chip blades.

Figure 18f. Stationary Blade

Figure 18g. Rotary Blade

5. Clean both input and exit edges of stationary blade.
 6. Clean all surfaces of rotary blade.
 7. Clean knife cover and frame for any buildup.
 8. Replace cover on knife then replace knife on machine following instructions in section 5.4.1.
-

6.0 Service Adjustments

6.1 Tape (Web) Guide Position

The tape (web) guide is set at the factory to center the tape to the printed image. If a slight mechanical adjustment is needed, follow these steps.

1. Locate the thumb screw on the top of the Tape (Web) Guide mount plate.
2. Open the web guides to the widest position by turning the knob above the guide clockwise.
3. Loosen the thumb screw.
4. Move the guide to the position desired.
5. Re-tighten the thumb screw.

6.2 Tape (Web) Guide Width Adjustments

Use the knob to move the guides until they touch the edges of the tape.

6.3 Auxiliary Feed

The Auxiliary Feed is the assembly located in front of the knife. It works with the main feed to maintain proper tension of the tape as it moves through the printer from the top print station into the Knife and Nip rollers.

If the tape will not advance through the Knife, check to be sure the knife is in the home position (see Sect. 5.4.2, Knife Home Position Adjustment).

6.4 Knife Shear Adjustment

The Knife Assembly in your SNAP 500 printer has no field replacement components, and basically requires no maintenance or adjustments. The only adjustment that can be made to the knife in the field is for shear.

WARNING: Knife adjustments procedure must be followed exactly or damage will occur.

WARNING: When adjusting, removing, or replacing the knife assembly, you must turn off the power to the printer to avoid personal injury.

1. Turn off the power to the printer.
2. Remove the knife assembly from the printer as described in Section 4.4.1. Refer to Figures 18a and 18b.
3. Loosen the outer pivot screw by making one complete turn (see Fig. 19a).
4. The two setscrews move the stationary outboard end of the knife to increase or decrease the shear.
5. To increase the shear, loosen the right setscrew $\frac{1}{4}$ turn (see Fig. 19b) and tighten the left setscrew (see Fig. 19c).

Figure 19a. Loosening Outer Pivot Screw

Figure 19b. Adjusting Right Set Screw

Figure 19c. Adjusting Left Set Screw

Figure 19d. Manual Rotation of Knife Shaft

6. Re-tighten the outer pivot screw. Screw should be snug but not over tightened. Over tightening may prevent the upper blade from rotating.
7. Rotate the shaft by hand, using the inboard shaft extending from the assembly (Fig. 19d). The knife should rotate freely, and will make a metallic shearing sound during rotation.
8. Insert a strip of the material to be cut so it extends from both sides of the knife. Test by rotating the knife shaft again to cut the material.
9. If the two parts of the material are still attached by thread, the knife is damaged and must be replaced.
10. If your test only cuts the material part way through, an additional adjustment is required.
11. Retest and repeat Steps 9 and 10 above.

6.5 Feed Assembly Adjustment

Feed Assembly adjustment is set at factory to track tape straight from last print station through knife and nip assemblies. Various circumstances can occur and result in stock tracking toward or away from printer causing jams. To adjust tape tracking follow these steps:

1. Start printing either a loaded batch or use test patterns as described in section 3.4.1. When printer begins printing apply slight resistance to unwind media (placing slight pressure with palm of hand to media is sufficient), making it harder for feed to pull material through machine.
 - a. If material begins tracking correctly adjust unwind tension higher following steps in section 8.1. Once in printer setting click tab for "Arbor Tension", then adjust "Stock Arbor" from "Nominal to Higher" a little at a time. Clear batch and retry until tape tracks correctly.
 - b. If material continues tracking abnormally after testing with slight palm pressure do not adjust tension mentioned in 6.5.1a and continue with step 6.5.2.
2. Check for missing, bound, or crushed auxiliary roller springs, damaged auxiliary rollers, or material that does not belong in feed assembly. If anything abnormal is present replace parts, if foreign objects are present, remove and retest to see if these were the cause.
3. If there are no mechanical issues adjust Feed Assembly alignment by backing out adjustment set screws shown in figure 20a using a 5/32 allen wrench until they stop on Feed Assembly frame. Note this only needs to be done until screws touch assembly, too much force will bend assembly frame.

Figure 20a: Adjustment Set Screws

4. Loosen 3 phillips head screws holding Feed Assembly to machine.

Figure 20b: Phillips Head Screws

5. Continue backing out adjustment set screws shown in figure 20a based on direction stock needs to track. Backing out screws on left will track web more inward (used when stock tracks towards front of machine). Backing out screws on right will track web more outward (used when stock tracks towards machine).
6. Begin by backing out adjustment set screws $\frac{1}{4}$ to $\frac{1}{2}$ turn at a time.
7. Retighten Phillips head screws shown in figure 20b and retry printing.
8. Continue with steps 5 through 8 until tape tracks appropriately.

7.0 Virtual Control Panel

PCMate Platinum has the ability to control the SNAP 500 printer and making adjustments right on the PC.

When a SNAP 500 printer is connected to PCMate Platinum (see the PCMate Platinum manual for details about printer connections), and the Print Module is active, a Virtual Control Panel is displayed at the bottom of the PCMate Platinum window (see figure 21).

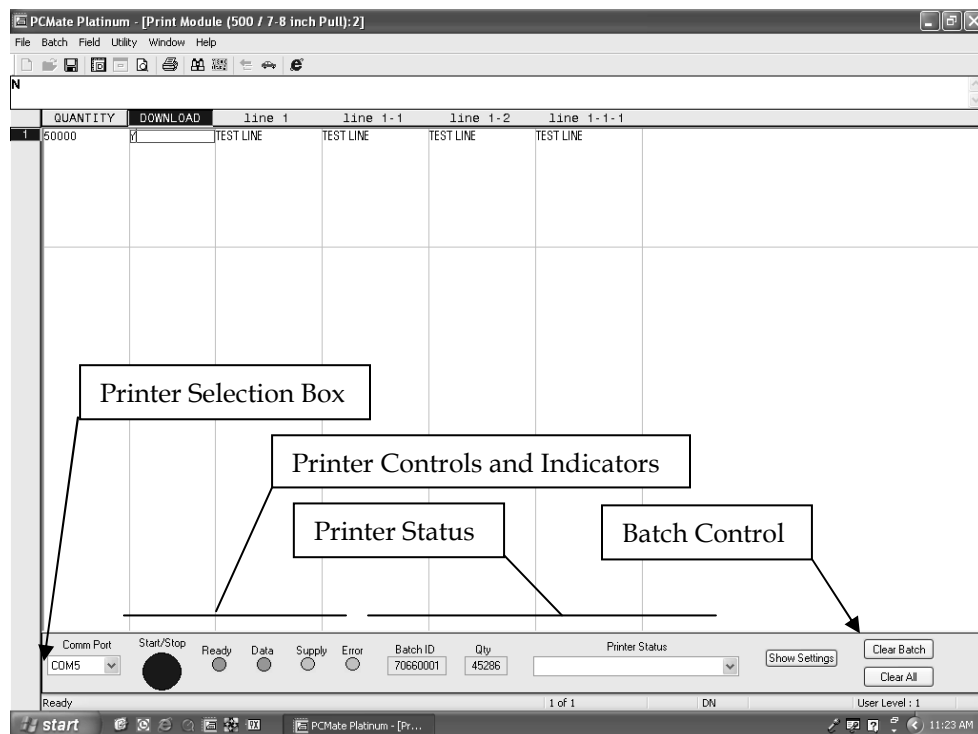

Figure 21: PCMate Platinum Print Module with Virtual Control Panel

If more than one printer is connected to PCMate Platinum at one time, select the active printer using the Printer Selection box at the left side of the Virtual Control Panel.

The Virtual Control Panel has lights and buttons that simulate the Control Panel of the printer and work in exactly the same way. You can start and stop the printer and monitor its status from the PC.

There is no Voice button on the Virtual Control Panel. Messages are displayed in the status box.

The Printer Status boxes show the Batch ID, Quantity and printer status.

You can clear the current batch or all batches using the Batch Control buttons on the right side of the window.

8.0 Changing Printer Setting in PC Mate

8.1 Viewing and Changing Printer Settings

The printers' settings can be viewed and changed using the Virtual Control Panel. Click on the Show Settings button to bring up the Settings Window (see figure 22).

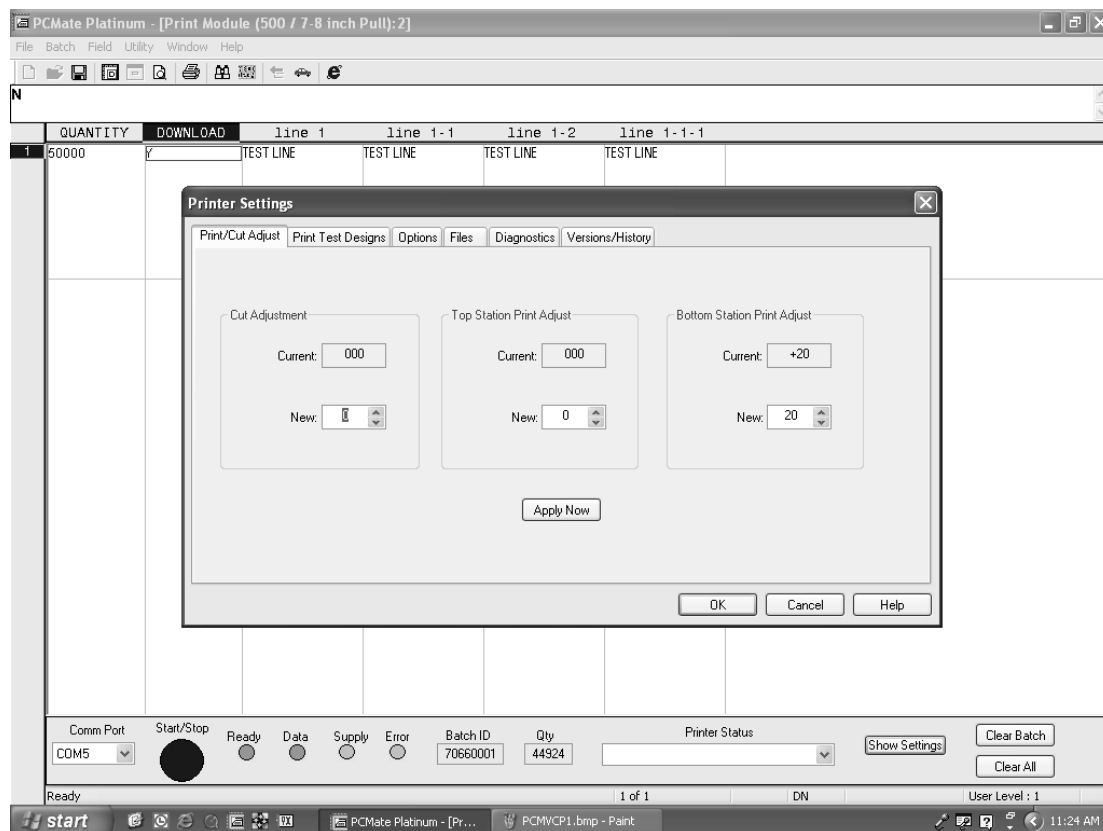

Figure 22: Virtual Control Panel with Show Setting Window

The settings are organized into a series of pages with tabs at the top. To select one of the pages, click on the tab. See section 4.4 for a description of the settings and how to change them.

9.0 Upgrading the Printer Software

9.1 Introduction

The SNAP 500 printer software otherwise known as firmware can be updated electronically. Software upgrades are distributed as a single file called the upgrade or UPG file. PCMate Platinum will take the UPG file and automatically upgrade the printer. Once the upgrade process is started, no other action is required.

9.2 What is Needed

There are three methods to upgrade the SNAP 500 2/1 printer:

1. The upgrade can be performed by PCMate Platinum. Therefore, you must have a Microsoft PC running PCMate Platinum to upgrade the printer software. See Section 2.1.3 for the minimum requirements to run PCMate Platinum. This takes approximately 15-20 minutes. Please be patient.
2. The upgrade file can be placed in the root directory of a USB flash drive and inserted in one of the USB slots on the back of the printer. When the printer is turned on, it will detect the USB flash drive and upgrade the printer automatically. NOTE: some older operating systems do not support this function. If you try it and it doesn't work, you must upgrade using method 1. This takes approximately 4-5 minutes.
3. If your printer has the Ethernet Interface Option, and your printer is running firmware version 3.28.16.02 or higher, you can upgrade through the printer's web server.

9.3 Getting the UPG file

9.3.1 Using D2Comm to get the UPG file

The easiest way to get the upgrade file is through D2Comm. (Contact your AVERY DENNISON Sales representative for information about D2comm). If you have a D2comm account, contact your D2Comm Coordinator and request that an upgrade be scheduled for your account. Once this is done, log onto D2Comm, select "In Plant", then "Retrieve Updates". The upgrade file will be automatically put on your PC, and the next time you start up PCMate, it will offer to upgrade the printer.

9.3.2 Getting upgrade file from D2Comm without password

You may download the upgrade file from D2Comm without a username and password.

1. Open a web browser and enter D2Comm.paxar.com in the address bar (note there is no www prefix).

2. Select Tech Support along the left side of the page.
3. Navigate to Software Downloads – Printer Operating System Releases – SNAP – SNAP Operating Systems.
4. Click on the file you want to download. There may be up to 3 upgrade files per release. For example, for version 3.28.16.02, the following upgrade files are available:
 - a. V3_28_16_02.upg – This is the complete upgrade and includes English and all alternate language messages and prompts
 - b. V3_28_16_02_OS.upg – This is the upgrade with only the English messages and prompts
 - c. V3_28_16_02_ALT_LANGUAGES.upg – This upgrade contains only the alternate language messages and prompts. This version does NOT contain the printer operating system.
5. Depending on your operating system, you may be able to choose the folder where the file will be placed, or it may be placed in a default download folder. If you are going to upgrade using PCMate Platinum, put the file in the C:\D2Comm\Control folder.

9.4 Getting Ready to Upgrade the Printer

In order to perform the upgrade, the printer must be turned on and connected to PCMate Platinum. Refer to the PCMate Platinum manual for instructions on connecting the printer.

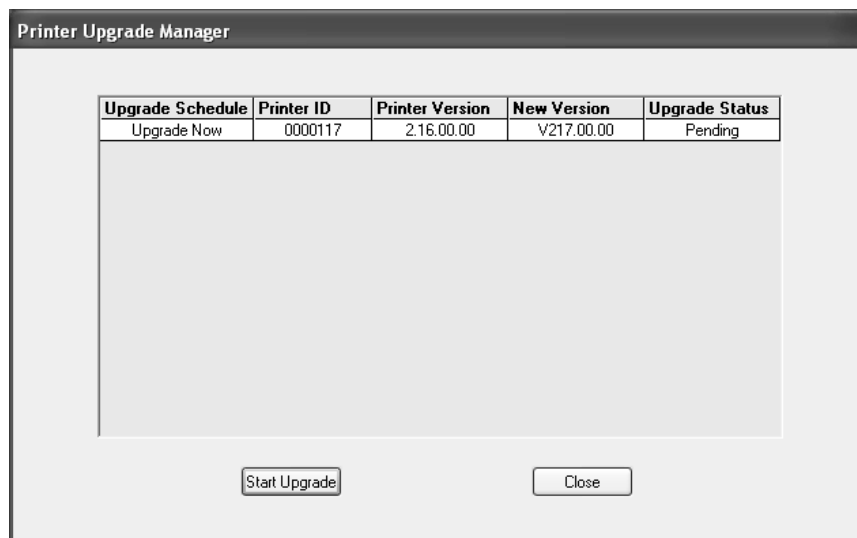

9.5 Performing the Upgrade

Start PCMate Platinum. The following screen will appear.

Click on the Yes button to start the upgrade. Clicking on the No button will take you into PCMate Platinum. Each time you start up PCMate Platinum, this screen will appear until you either perform the upgrade or remove it (see below).

When you click on the Yes button, the following screen will appear.

If you have more than one printer connected to the PC, they will all show in this window. If you leave the Upgrade Schedule box at Upgrade Now (see below), all the printers will be upgraded, one at a time.

In the box under Upgrade Schedule, it will say Upgrade Now. If you click on the box, a drop down list will offer the following choices:

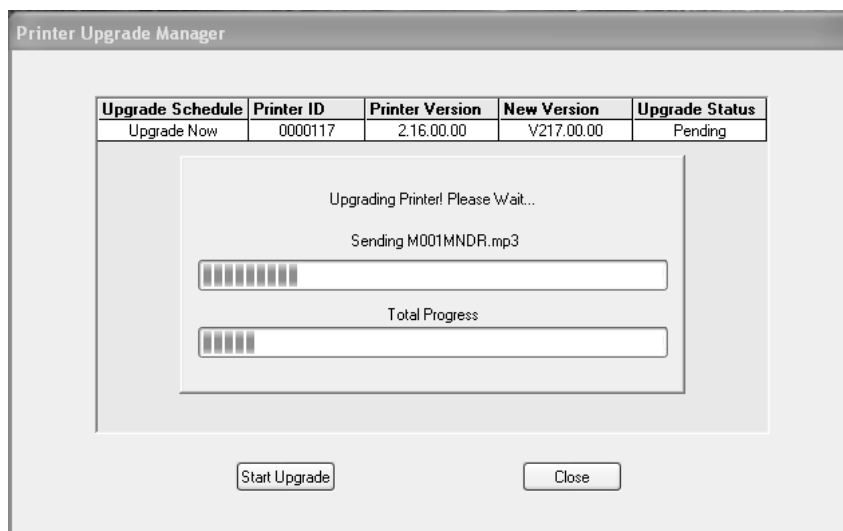

- Upgrade Now – this will cause the printer to be upgraded when you click on the Start Upgrade button.
- Upgrade Later – This choice will skip the upgrade for that printer, but keep the upgrade file. The next time you start PCMate Platinum, the upgrade will be offered again. This allows you to skip the upgrade until later.
- Remove Upgrade – If you select this option, the printer will not be upgraded, and the upgrade file will be deleted.

To start the upgrade, click on the Start Upgrade button. No further action is required until the upgrade process is complete.

The upgrade process can take quite a while. If the process is interrupted, the printer will attempt to revert to the last revision. If it fails, it will revert to a safe version. If this occurs, it will be necessary to redo the upgrade.

The following window will appear.

The following description of the upgrade process is accurate as of this writing. However, changes may be made to improve the process. It is important to allow the process to finish.

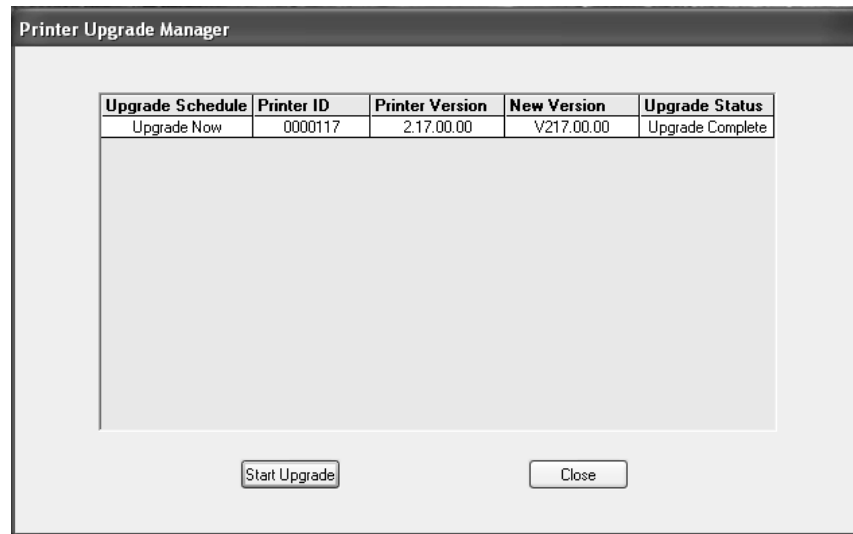

During the first part of the upgrade process, PCMate Platinum sends the necessary files to the printer. This screen allows you to monitor the progress of the file transfer. The top progress bar shows the file being sent, while the bottom bar shows the overall progress.

Once all the files have been transferred to the printer, the printer must perform its upgrade. The following window will appear.

The printer will reboot and say, "Upgrade in progress. Please wait." After a few minutes, the printer will reboot again. It will then say "Programming MCB. Please wait" At this time, the lights on the printer control panel will all come on.

After a few minutes, the printer will reboot again. After a few more minutes, the following window will appear on the PC.

The Upgrade Status is now "Upgrade Complete". Click on Close to continue to PCMate Platinum.

10.0 Electrical Troubleshooting

10.1 Power Up / Sign On / Communications

Problem	Probable Cause	Corrective Action
LEDs do not light.	1) Insufficient supply voltage.	1) Look at the line voltage level shown on the back of the printer (see Figure 5). Confirm that the mains line voltage for your location is within the range limits.
	2) Machine is not plugged in.	1) Check that both ends of the power cord are plugged in securely. 2) Confirm that the outlet the machine is plugged into has power.
LEDs flash	1) PC board power failure	1) Cycle the power off and back on again.
Printer says "Boot Error 1" or "Hardware error 1. Printer requires service" or "PCI interface bad. Change the MCB" during power up	1) PCB failure	1) Replace MCB board
	2) Motherboard failure	1) Replace motherboard
Printer says "Boot Error 2" or "Hardware error 2. Printer requires service" or "BIOS Corrupted. Replace the motherboard or reset the BIOS" during power up	1) Corrupted BIOS	1) Connect a standard PC monitor and keyboard to the printer and follow the instructions found in the Engineering Bulletin "06_015_500_BIOS_Revised.doc" to reset the BIOS settings.
	2) Motherboard failure	1) Replace motherboard
Printer says "Boot Error 3" or "Hardware error 3. Printer requires service" or "Corrupted safe operating system. Replace the flash disk" during power up. (Message depends on software version.)	1) Flash Disk Failure	1) Replace Flash Disk Module
	2) Motherboard Failure	1) Replace motherboard

Printer says "Boot Error 4" or "Hardware error 4. Printer requires service" or "Cannot communicate with the MCB. Change the MCB" during power up. (Message depends on software version.)	1) PCB failure	1) Replace MCB Board
	2) Motherboard Failure	1) Replace motherboard
Printer says "Running Backup Operating System. Please upgrade" after power up. (Message depends on software version.)	1) Upgrade failure	1) Upgrade to the latest operating system.
Printer says "Running Safe Operating System. Please upgrade" after power up. (Message depends on software version.)	1) Software failure	1) Upgrade to the latest operating system. NOTE: The safe operating system will run the printer, but it does not have the latest features and improvements. Upgrade as soon as possible.
Machine does not receive data.	1) Communications cable is loose or unconnected.	1) Check and secure both ends of the serial cable with the thumbscrews.
	2) Incompatible communication cable	1) Ensure the communication cable is a null modem serial cable with DB9F connector.
	3) Machine is not powered on or has not completed diagnostics tests.	1) Power machine on and wait until machine ready light is on. Re-download data.
	4) Data sent to wrong printer.	1) In PCMate change to the printer where the data is intended to be sent.
	5) Configuration incorrect in PCMate.	1) Reconfigure PCMate for AVERY DENNISON PCL printer as per your PCMate manual.
	6) Faulty Mother Board	1) Replace the Mother Board.

IF THE RECOMMENDED CORRECTIVE ACTIONS DO NOT RESOLVE THE PROBLEM (S), CONTACT YOUR LOCAL AVERY DENNISON REPRESENTATIVE.

10.2 Tape / Ink Advance

Problem	Probable Cause	Corrective Action
Tape or ink does not advance when the start button is depressed.	1) No batches to be printed. (Data light is not on.)	1) Download batch (If batch downloaded uses the same design as a previously downloaded batch, the machine will start automatically).
	2) An interlock condition exists. (Supply or Error light is on.)	1) Press the voice button to determine the error. 2) If using PCMate Platinum, check the virtual control / display. 3) If using the Remote Control / Display Module, view error message.
	3) Tape is bound.	1) Remove and rethread the tape.
	4) Ink is bound.	1) Remove and rethread the ink.
Tape tracks inward or outward while printing	1) Stock Arbor Tension too low	1) See Section 6.5
	2) Feed Assembly Alignment Incorrect	
	3) Feed Assembly Damage	

IF THE RECOMMENDED CORRECTIVE ACTIONS DO NOT RESOLVE THE PROBLEM (S), CONTACT YOUR LOCAL AVERY DENNISON REPRESENTATIVE.

10.3 Print

Problem	Probable Cause	Corrective Action
Tape advances but the printer does not print.	1) Tape registration sensor is misaligned (preprinted tapes only).	1) Re-align sense mark with sensor, refer to section 3.3.6.2 Sensors.
	2) Print head cable is disconnected or faulty.	1) Power off the machine and reinsert the print head connector or replace the cable.
	3) Print head is faulty.	1) Replace the print head.
	4) Tape and Ink Transfer Type selection in Design File doesn't match supplies.	1) Refer to the PCMate software manual.
Machine stops after every third label.	1) Tape registration sensor is misaligned (preprinted tapes only).	1) Refer to the PCMate software manual.
	2) Label length selection in the Design File doesn't match the printed tape length.	
Print registration is off in the feed direction.	1) Print position is incorrect.	1) Use the Virtual Control / Display or Remote Control / Display to adjust the print position.
	2) Field(s) position incorrect in the Design File.	1) Refer to PCMate software manual.
	3) Sense-to-cut selection in the Design File is incorrect.	1) Refer to PCMate software manual.
	4) Bound print roller.	1) Check that the print roller turns freely on its shaft. If it does not, replace it.
Print registration is off in the web direction.	1) Machine is incorrectly threaded.	1) Check and rethread the media as needed. Refer to section 3.1.3 Loading the Tape.
	2) Web guides incorrectly adjusted.	1) Check and adjust web guides as needed. Refer to section 6.2, Tape (Web) Guide Width Adjustments.
	3) Tape Arbor is not tight.	1) Check and adjust as needed. Refer to section 3.1 Loading Supplies.

IF THE RECOMMENDED CORRECTIVE ACTIONS DO NOT RESOLVE THE PROBLEM (S), CONTACT YOUR LOCAL AVERY DENNISON REPRESENTATIVE.

Problem	Probable Cause	Corrective Action
Print density is too light or too dark.	1) Tape and Ink Transfer Type selection in Design File doesn't match supplies.	1) Refer to the PCMate Platinum software manual.
	2) Incorrect contrast setting in the machine setup.	1) Adjust the contrast control on each print head. Refer to section 4.1 Print Head Adjustments.
	3) Misadjusted print head pressure.	1) Set print head pressure. Refer to section 4.1 Print Head Adjustments.

Problem	Probable Cause	Corrective Action
Voids in print image in the feed direction.	1) Ink is misaligned with the tape.	2) Ink must be 1/4" or 5 mm wider than the tape. Example: 1"(25 mm) web requires 1 1/4" (30 mm) ink.
	2) Print head is dirty.	1) Power off the machine. Clean the print head and print. Refer to section 5.1, Print Head Cleaning and Handling.
	3) Faulty print head.	1) After cleaning the print head and running a test label, if a void still exists, replace the print head.
	4) Misadjusted print head pressure.	1) Set print head pressure. Refer to section 4.1.1, Adjusting Print Head Pressure.
	5) Worn printer roller.	1) Contact your local AVERY DENNISON representative.

IF THE RECOMMENDED CORRECTIVE ACTIONS DO NOT RESOLVE THE PROBLEM (S), CONTACT YOUR LOCAL AVERY DENNISON REPRESENTATIVE.

10.4 Cut / Stack

Problem	Probable Cause	Corrective Action
Machine fails to cut labels (the rotary knife does not rotate).	1) The knife is disabled.	1) Enable the knife in the setup menu via the Remote Control / Display Module section 7.0, or through the Virtual Control / Display in PCMate Platinum section 8.0.
	2) Cut count is set to "0" in the Design File.	1) Refer to the PCMate software manual.
The stacker platform fails to run.	1) The stacker cable is disconnected.	1) Power off the machine and insert the stacker cable in the stacker port.
Labels will not stack.	1) Stacker is not operating.	1) Be sure the nip roller is free to rotate.
	2) Stacker position on the machine too high or too low.	1) Move the toggle switch to the opposite position.
	3) Incorrect position platform bed angle.	1) Use the pull pin to change the platform angle.
Knife does not cut completely through.	1) Knife blade shear is misaligned.	1) Refer to section 6.4, Knife Shear Adjustment.
Knife will not cut.	1) Knife blades are dull.	1) Refer to section 5.4.1, Removing and Replacing the Knife assembly.

IF THE RECOMMENDED CORRECTIVE ACTIONS DO NOT RESOLVE THE PROBLEM (S), CONTACT YOUR LOCAL AVERY DENNISON REPRESENTATIVE.

10.5 Printer Errors

Printer errors are indicated by either the Supply or Error light being on.

When the Supply light is on, the printer supplies (tape or ink) require attention. Generally, this means the tape or one of the ink rolls is empty, or the stacker is full.

If the Error light is on, some condition occurred that would not allow the printer to continue printing.

Whenever either the Supply or Error light is on, pressing the Voice button will play a message describing the problem. If you are using PCMate Platinum, an error message will be displayed in the Printer Status box of the Virtual Front Panel, or if you have a Remote Front Panel, the error message will be shown on the display.

The table below shows all of the printer error messages, along with a description of the problem and some possible solutions.

Voice Message	Prompt	Description
Knife Error. Press start to continue.	KNIFE DID NOT HOME	The knife did not complete the cut properly, or the knife could not initialize properly. Try again. If this happens frequently or continuously, the knife needs service
The stacker is full. Remove labels from the stacker.	STACKER FULL	The stacker is full. Remove all labels from the stacker. If this error occurs when there are no labels on the stacker, the stacker requires service.
Stacker sensor error. Remove labels from the stacker.	STACKER SENSOR ERROR	This error occurs when the stacker tries to position the platform before printing. The platform position sensor did not respond as expected. This is usually caused by labels blocking the sensor. Remove all labels from the platform and try again. If the error still occurs, the stacker requires service.
Open the bottom print station for a single sided format	BOTTOM CLOSED	The bottom print station roller must be open to print a single-sided format. This eliminates the need to install ink on the unused station. If this error occurs when the bottom station roller is open, the head open sensor is not working.
Lower (Upper) print station error. Printer requires service.	ST1 (2) LOW TEMP READ ERR	This error indicates that the upper or lower printhead temperature is out of normal range. This is generally caused by a disconnected printhead. Check the printhead connections. If the error still occurs, change the printhead. If the error still occurs, replace the printhead cable. If the error still occurs, replace the MCB.

Voice Message	Prompt	Description
Internal error. Press start to continue.	MCB CMD_FRE INDEX ERR MCB CMD_FSE INDEX ERR MCB BAD STACK ERROR MCB KNF FLIT TBL TOO BIG MCB KNIFE STATE TOO BIG MCB KNIFE STATE TOO BIG MCB BEMF MON ST TOO BIG MCB STACKR HM ST TOO BIG MCB KNF HOME ST TOO BIG MCB BEMF CTRL ST TOO BIG MCB SHE BATCH Q OVERFLOW MCB FVE INDEX ERROR MCB ERROR #58 MCB ERROR #59 MCB ERROR #60 MCB ERROR #64 MCB ERROR #68 MCB ERROR #69 MCB ERROR #70 MCB ERROR #91 MCB ERROR #95 MCB ERROR #97 MCB ERROR #98 MCB ERROR #99	These are internal software errors. If one of them occurs, clear the error and continue. If the error continues to occur, report the error and the circumstances that cause it to AVERY DENNISON Service. These errors are caused by errors in the software and are not caused by hardware failures.
Internal error. Press start to continue.	OUT OF MEMORY IMAGER ERROR 919	These are internal errors similar to the ones above. However, these errors will require power cycling the printer. If the error continues to occur, report the error and the circumstances that cause it to AVERY DENNISON Service.
Knife cycle error. Increase label length or select a slower print speed.	LBL TOO SHORT FOR SPEED	This error indicates that the label is shorter than the minimum length for the selected print speed. Refer to the Printer Specifications for minimum label lengths. (Minimum label lengths are different for the Sonic Knife. Refer to the Sonic Knife manual.) To run and cut the label, you must either make the label longer or reduce the print speed.
The tape supply roll is empty	STOCK OUT	This error indicates the tape supply roll is empty. If the tape supply roll is not empty, make sure the supply core is firmly held by the arbor clamp. If this error continues to occur, remove the tape roll and press the Start button (the Ready light must be on). The tape arbor should spin counter-clockwise briefly. If it doesn't, the motor or MCB is defective. If it spins and you continue to get the error after re-installing the tape roll, the MCB is defective.

Voice Message	Prompt	Description
The lower (upper) print station ink roll is empty	INK OUT BOTTOM (TOP)	This error indicates that the ink on the specified print station is either missing or broken, or the supply roll is empty. If this error continues to occur even though the ink supply rolls are properly installed, remove the ink rolls and press the Start button. The unwind (supply) arbor should spin counter-clockwise and the rewind (take-up) arbor should spin clockwise briefly. If one or both of the motors does not spin, the motor(s) or MCB are defective. If both motors spin, install a new ink roll. If the error continues to occur with the new ink roll, the MCB is defective.
The lower (upper) print station roller is open	HEAD OPEN BOTTOM (TOP)	This error indicates that either the upper or lower platen roller is open. Close the roller. If the error continues to occur when the roller is closed, check the roller open sensor.
Missed sense mark	MISSED SENSE MARK	The format specifies a sense mark, but no sense mark was found. Possible causes are misalignment of the sensor to the sense mark or incompatibility of the sense mark and the sensor type. Another possible cause is a mismatch between the label length that is set in the format with the actual distance between sense marks on the stock.
The lower (upper) print head is overheated. Wait until the error light to go out then press start to continue	HEAD 1 (2) OVER TEMP	The printer continuously monitors the temperature of the printhead to ensure it doesn't overheat and damage the printhead. When the printhead temperature reaches a pre-set limit, the printer will stop with this error. Wait for the error light to go out and continue printing. However, it is likely that the error will happen again. Possible solutions are to reduce the print speed or to reduce the amount of copy on the label. If this error happens when the printer is first turned on or does not clear itself within a few minutes, the printhead or MCB may be defective.
Bar code failure	VERIFIER HALT 1 (2) 912 (Note: there is no difference between 1 and 2)	This indicates that the bar code verifier found a bad bar code. The most likely cause is a print quality problem such as an ink wrinkle or a dot out on the printhead. If this error happens on every label, check the printhead for dots out. If this error happens often, but not every label, check the bar code minimum height requirement or lower the ANSI grade.
Communication error. Press start to continue.	BUFFER OVERFLOW	This error indicates that the host computer sent more data than the printer can handle. This error is generally caused by a mismatch in the serial protocol setting (XON/XOFF or RTS/CTS) between the printer and the host, or a cable that does not have the RTS/CTS lines.
N/A	TOO MANY FIELDS	The number of fields on the label exceeds the maximum number allowed.
The imager and MCB software versions are not compatible	SOFTWARE MISMATCH	The printer checks to make sure the software versions within the printer are compatible. This error indicates that the versions are not compatible. Upgrade to the latest operating system software.

Voice Message	Prompt	Description
Internal error. Press start to continue.	MCB ERROR #61	These errors are all related to identification devices in the printer or peripherals that are used to read the printer configuration. If one of these errors continues to occur after a power cycle, disconnect all peripherals (stacker, sonic knife, etc.). If the problem still occurs, replace the Frame ID memory. If it still occurs, replace the MCB. If disconnecting the peripherals fixes the problem, reconnect one at a time to determine which one is causing the problem, then replace the printer interface harness.
	MCB ERROR #62

Internal error. Press start to continue.	MCB ERROR #96	This error is related to the Security Batch Count feature. It indicates that the Batch Count queue is full, which should never happen. The only way to recover from this is to reset the MCB by removing the battery on the MCB with the power off, then replacing it. This will also reset all the printer settings (print and cut adjust, baud rate, cutter enable, etc.) to their default values.

IF THE RECOMMENDED CORRECTIVE ACTIONS DO NOT RESOLVE THE PROBLEM (S), CONTACT YOUR LOCAL AVERY DENNISON REPRESENTATIVE.

11.0 Mechanical Troubleshooting

11.1 Tape

Problem	Probable Cause	Corrective Action
Tape will not roll smoothly or the tape jumps.	1) Web guides are incorrectly adjusted.	1) Be sure stock roll is as flat as possible and do not extend over core. 2) Adjust web guides to touch stock roll, but do not pinch the roll.
Tape does not pull smoothly through print head module.	1) Web guides are too tight.	1) Adjust web guides to touch outer edges of tape with the minimum pressure required.
Tape jams in bridge blade rollers or knife area.	1) Knife not cutting the full width of stock.	1) Refer to section 6.4, Knife Shear Adjustment.
	2) Nip rollers are not turning.	1) Be sure the nip roller is free to rotate and moves easily in the bearing slots. Check for a loose drive gear.

IF THE RECOMMENDED CORRECTIVE ACTIONS DO NOT RESOLVE THE PROBLEM (S), CONTACT YOUR LOCAL AVERY DENNISON REPRESENTATIVE.

11.2 Ink

Problem	Probable Cause	Corrective Action
Ink wrinkles or will not pull smoothly.	1) Ink supply and rewind rolls are misaligned.	1) Make sure rewind core is equal to or wider than the supply roll width. 2) Check that the motor is working and has back tension on the supply roll.
	2) Ink buildup on the turn bar(s).	1) Clean the turn bar(s) with alcohol.
	3) Incorrect ink width.	1) Use an ink width $\frac{1}{4}$ " (5 mm) wider than the tape being printed on.
Ink rolls loosely on Rewind core.	1) Ink rewind roll not turning.	1) Check that the motor is working.
	2) Ink rewind roll is too full.	1) Remove ink rewind roll. Replace ink rewind roll with an empty core.

11.3 Print

Problem	Probable Cause	Corrective Action
Poor print – uneven or no print.	1) Print head pressure is too light.	1) Move pressure buttons to opposite position. 2) Ensure that both pressure buttons are set to the same position.
	2) Ink rewind roll is too full.	1) Remove ink rewind rolls and replace with empty cores.

11.4 Knife

Problem	Probable Cause	Corrective Action
Knife stops during cut in stock.	1) Knife blades are dull.	1) Refer to section 5.4.1, Removing and Replacing the Knife Assembly.
Tape is popping in front of the knife.	1) Knife blades are dull.	1) Refer to section 5.4.1, Removing and Replacing the Knife Assembly.

IF THE RECOMMENDED CORRECTIVE ACTIONS DO NOT RESOLVE THE PROBLEM (S), CONTACT YOUR LOCAL AVERY DENNISON REPRESENTATIVE.

Ink Ribbon	AVERY DENNISON standard thermal colors and widths AVERY DENNISON white plastic core: Maximum Ink I.D. 3.5" Ink widths: With Metric Adapter - 25mm, 30mm, 35mm 40mm, 45mm, 50mm or 60mm metric widths only. With Inch Adapter - 1", 1 ¼", 1 ½" 1 ¾", 2", 2 ¼" or 2 ½" inch widths only.
Options	<ul style="list-style-type: none"> - Back reflective sensor — Reads black sense mark printed on back of white preprinted tape, centered in web. - Contrast sensor — Reads sense mark printed on front of preprinted

	tape. Sense mark or tape may be colored.
Serial Port Default Setup	Default serial port configuration is 115,200 baud, no parity, 8 data bits, 1 stop bit.

3. Warranty Policy

Avery Dennison Retail Branding and Information Solutions provides the following warranty policy.

Scope

Warranties against defects from workmanship for equipment and parts manufactured and sold from Miamisburg, OH. Includes time and material except as otherwise noted below.

Time

- New equipment and parts: 1 year, return to depot.
- Refurbished equipment and parts: 90 days
- Warranty period starts when equipment ships from selling location.

General Conditions

Avery Dennison extends warranty coverage under the following conditions.

- Equipment and parts will perform within published specifications. Promised or implied statements by any Avery Dennison employee or representative will not be deemed to vary the terms of the warranty.
- Equipment and parts must be installed and operated according to recommended procedures and operating conditions.
- Consumable elements are not covered. Consumable elements are those that show normal wear from typical equipment usage including, without limitation, print heads, knives, rollers in contact with the web, and sonic units. Avery Dennison reserves the right to determine which elements are defined as “consumable.”
- No customer maintenance may be performed except as directed by qualified Avery Dennison personnel.
- Equipment and parts damaged by negligence or abuse are not covered.
- Avery Dennison US reserves the right in its sole discretion to incorporate any modifications or improvements in the machine system and machine specifications which it considers necessary but does not assume any obligation to make said changes in equipment previously sold.

- Warranty coverage is provided “return to depot” by returning the printer to Miamisburg OH or your shipping location. On-site warranty service is available if you purchase a service contract at time of printer purchase. You will not lose the warranty period.

Equipment Purchased In US and Shipped In US

- Avery Dennison US covers warranty for equipment and parts installed and operated in the Americas (United States, Canada, Mexico, Central America, Caribbean Region, and South America excluding Brazil).
- Outside the US, the local Avery Dennison office is responsible for equipment and parts warranty. Customers must ensure coverage during machine purchase.
- Equipment purchased and exported to regions outside local Avery Dennison office coverage is not covered by warranty. The purchasing agent must acquire a service contract from the Avery Dennison office where the equipment or parts are operated to ensure machine coverage. For example, if an agent purchases a printer in the US, exports to Brazil, and then needs warranty coverage, Avery Dennison Brazil has no obligation to provide warranty coverage. The agent must purchase services from Avery Dennison Brazil.

THE WARRANTIES PROVIDED HEREIN ARE EXCLUSIVE AND ARE IN LIEU OF ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR OTHER WARRANTY OF QUALITY OR PERFORMANCE, WHETHER EXPRESS OR IMPLIED. EXCEPT THE WARRANTY OF TITLE, IN NO EVENT SHALL AVERY DENNISON BE LIABLE FOR ANY INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES, EVEN IF AVERY DENNISON HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.
